

Laurie Reynolds

[linkedin.com/in/lauriesreynolds](https://www.linkedin.com/in/lauriesreynolds)

Remote, CA, USA

Senior Front-End Software Engineer

Summary

- Senior/Staff Front-end engineer with deep experience building accessible, high-scale applications across global e-commerce (Walmart Payments), civic tech (U.S. Digital Response, Nava PBC), and FDA-regulated systems (Thermo Fisher, Siemens Medical/Acuson).
- Led frontend engineering for web payment systems on Walmart.com (Supplemental Nutrition Assistance Program (SNAP), Women, Infants, and Children (WIC), PayPal, Affirm, Credit Card) serving millions of daily users.
- Introduced and scaled accessibility tooling (eslint-plugin-jsx-a11y, jest-axe) in a 1,000+ developer monorepo, shipping payment systems with zero blocker a11y bugs.
- Currently expanding into AI-enabled application development, including retrieval-augmented generation (RAG), agentic workflows, evaluation, and grounded AI experiences, while continuing hands-on work in React, Next.js, accessibility, and front-end architecture.
- Drives alignment through early prototyping, journey-based technical design, and mentoring; collaborative across product, design, security, and engineering.

Skills

- **Languages & Frameworks:** TypeScript, JavaScript (ES6+), React, [Next.js](#), Node.js, GraphQL, Python, Vue, Tailwind CSS, D3.js, Figma, Redux, Design Systems, SSR
- **AI & Data:** OpenAI API, RAG, Postgres/pgvector, AI evaluation
- **Testing & Tooling:** Vitest, Jest, Playwright, React Testing Library, Mock Service Worker, axe DevTools, eslint-plugin-jsx-a11y
- **DevOps & Deployment:** Docker, CI/CD, Vercel, Splunk, PostgreSQL, MSSQL, MySQL
- **Other:** Accessibility (a11y), Performance Optimization, PCI DSS, CCPA, FDA 21 CFR Part 11, Agile, Scrum Certification

Experience

Independent Software Engineer - Front-End & Applied AI

May 2025 - Present

Fully Remote

Building and evaluating modern front-end and AI-enabled applications while deepening expertise in agentic AI, retrieval-augmented generation, accessibility, and scalable application architecture.

- Design and build React/Next.js applications and prototypes exploring AI-assisted workflows, RAG, structured retrieval, tool use, citations, evaluation, and graceful failure modes.
- Develop ArtLoupe, an AI-assisted art exploration and analysis platform integrating external museum and image APIs with accessible, responsive data visualizations and AI-generated analysis.

- Apply production engineering practices—including accessibility, automated testing, performance, observability, and component architecture—to experimental and AI-enabled applications.

Tech Stack: TypeScript, React, Next.js, Astro, Tailwind CSS, D3.js, Node.js, Python, OpenAI API, Postgres/pgvector, Supabase, Vercel, Vitest, Playwright, Storybook

Web Development & A11y Evaluations (Volunteer)

Accessible Community

Accessibility evaluations for nonprofit and small-business websites; site updates plus type-checking and end-to-end testing added to CI. **Tech Stack:** Astro, TypeScript, Playwright

October 2025 - Present (9 months)

Fully Remote

Principal Engineer

Nava PBC

Brought in to help form a new team supporting the New Jersey Department of Labor’s unemployment services. Onboarded and mentored several engineers, coached one new hire on front-end work, established a meeting-free focus day, and ensured a smooth handoff to the incoming team lead.

February 2025 - May 2025 (4 months)

Fully Remote

Senior Front-End Engineer (Volunteer)

U.S. Digital Response

Extended Grant Finder functionality. Improved the testability and accessibility of the Grant Finder and American Rescue Plan Act (ARPA) Reporting applications. Refactored UI components for keyboard navigation and screen reader compatibility. **Tech Stack:** Node, Postgres, Accessibility (a11y), Vue, Docker

October 2024 - February 2025 (5 months)

Fully Remote

Staff Software Engineer

Senior Software Engineer

Walmart Global Tech (5 years)

Led frontend engineering for web payment systems on Walmart.com (EBT SNAP, PayPal, WIC, credit card, Affirm) used by millions of customers daily. Focused on accessibility, performance, and maintainable architecture across checkout and billing experiences, collaborating closely with web, mobile, backend, product, UX, security, fraud, and international teams.

May 2023 - August 2024

February 2019 - May 2023

Carlsbad, CA and Fully Remote

Architecture & Component Systems

- Built a reusable React Wallet component that reduced duplication and simplified payment integration across Checkout, W+ Membership, Buy Now, and Subscription flows.
- Implemented third-party payment verification with resilient retry logic to reduce transient failures, mitigate fraud risk, and improve transaction reliability.
- Developed a dynamic, card-type-aware payment form that rendered required fields based on detected payment type and supported both side-panel and embedded checkout layouts without duplicating UI logic.

Security & Compliance

- Led InfoSec submissions for web and mobile Payments applications (PCI compliance, audit readiness).

- Contributed to company-wide California Consumer Privacy Act (CCPA) compliance initiative under strict regulatory deadline, supporting production cutover and release coordination.
- Built a schema-driven nutrition label renderer to support regulatory update requirements, enabling structured, maintainable layout changes.

Performance, Experimentation & Reliability

- Reduced app load time and improved Core Web Vitals through bundle optimization, lazy loading, and skeleton UI.
- Proactively monitored checkout experiment dashboards, comparing control and variant error rates to identify discrepancies early and protect experiment validity.
- Increased test coverage and reliability through audit and refactor of React/TestCafe integration suites.
- Improved CI stability across frontend deployments using Mock Service Worker and test isolation.

Accessibility Leadership

- Introduced and scaled shift-left accessibility tooling (eslint-plugin-jsx-a11y, jest-axe) within a large frontend monorepo.
- Remediated accessibility violations and launched payment systems with zero blocker accessibility bugs.
- Facilitated an accessibility workshop for ~50 engineers, product, and UX team members, promoting accessible design and development practices.
- Delivered internal talks on accessible design analysis and unit test strategies to reduce regressions.

Operational Support & On-Call

- Participated in on-call rotation during peak traffic periods, including holidays, supporting production incidents and collaborating with third-party payment providers to mitigate downtime.
- Authored incident response guidelines and collected Splunk queries and dashboards to assist on-call engineers in rapid triage and recovery.

Tech Stack: React, Node, Next.js, GraphQL, React Testing Library, TestCafe, TypeScript, Figma, JavaScript, Splunk, Mock Service Worker, i18n, accessibility (a11y), Core Web Vitals, Tachyons, server-side rendering, axe DevTools, Chrome DevTools, custom A/B experimentation platform

Senior Front-End Software Engineer

September 2017 - January 2019 (1+ year)

[24]7.ai (247.ai)

San Jose, CA

Delivered web-based tools for language tagging, bot testing, and data labeling, improving machine language model iteration cycles. Designed React-based reusable component system to support Natural Language Understanding (NLU) model workflows.

Tech Stack: React, redux, grommet, webpack, mysql, elasticsearch, kibana, node, java, javascript, es6, sketch, invision, jira, confluence

Senior Software Engineer

April 2016 – September 2017 (1+ year)

Kofile

San Francisco, CA

Developed an administration application for clerks to configure the recording system. Worked closely with the UX team to develop new React components and achieve pixel-level match to the design.

Tech Stack: HTML, CSS, Javascript, React, Redux, Node, MSSQL, Github, Karma, Mocha, Codeceptjs, Sketch, Postgres, Semaphore, Proxyquire, Sinon, React-Router

Career Transition & Volunteer Work

February 2015 – April 2016 (1+ year)

Code for San Jose

San Jose, CA

Collaborated with the City of San Jose Economics Office to build an interactive dashboard with D3.js visualizations and configurable data displays. First React/D3 project, marking transition from scientific programming to web development.

Tech Stack: React, D3.js, HTML/CSS, JavaScript, Redux, Travis CI, Mocha, Karma, Sketch

Regulated & Medical Software Engineering Experience

1999 - 2013

Senior engineering roles across medical imaging, biotech, and regulated scientific systems, delivering compliant UI platforms and data-intensive applications.

Principal Scientific Programmer

1+ year

Nodality, Inc.

South San Francisco, CA

Managed laboratory software development in a biotech startup using C#, WPF, SQL Server, Python, Django, and D3.js

Lead Software Engineer

7 years

Thermo Fisher Scientific

San Jose, CA

Led development of FDA-regulated laboratory and diagnostic applications, delivering 21 CFR Part 11 compliant software for drug discovery. Supported collaboration to use Thermo Fisher products for drug testing at the 2012 Olympics.

Senior Software Engineer

5 years

Siemens Medical Solutions (Acuson)

Mountain View, CA

Developed advanced imaging UIs and visualization tools for Sequoia ultrasound systems. Contributed to standards-aligned medical imaging workflows.

Media and Financial Experience

Rovi Corporation, Knight Ridder Digital, Associated Press, Thomson Grass Valley (Dubner Computer Systems), Tudor Investments, Knight Ridder Financial, Sony Electronics (Medical Division).

Education

- M.S. Mathematics, B.S. in Computer Science - Fairleigh Dickinson University – Hackensack, NJ
